

## PRODUCTS

# Planter Mix

### Primary values:

Z-Best Planter Mix is a premium blend planter mix that can be used to fill pots and flower beds or to supplement and enhance your existing soil.

### Recommended Uses:

Use Z-Best Planter Mix for container planting, in raised beds, for new lawns, or anywhere that you would need to raise the existing grade. Particle size and texture are optimized to provide enhanced aeration, moisture retention, and drainage.

### BEST PRACTICES:

Add Z-Best Planter Mix in raised beds for flower and vegetable gardens; it contains organic material, which expands when watered and contracts as it dries, adding spaces of air, which are beneficial for developing a healthy root system. Z-Best Planter Mix is a good choice for raising the existing grade prior to planting. Planter mix can be mixed thoroughly with Z-Best Landscape Compost and then used when planting trees, shrubs and other ornamentals. Purchase Z-Best Planter Mix by the cubic yard – we'll load it directly into your truck

### Specifications:

Z-Best Planter Mix is made from screened clean topsoil, with Organic soil amendment and a small amount of nitrogen fertilizer added in. Please see our soil analysis for additional information.
